

## Avacom email-messaging Archive for Exchange

Avacom email and Messaging Archive for Exchange server is a complete solution that connects to your network and manages email-messaging archive and retrieval.

With business increasingly transacted around the clock and in multiple locations, corporate e-mail traffic grows heavier every year. However, the more information employees keep in their e-mail folders, the more time they must spend searching for a particular message or attached document. IT administrators, in turn, face constant demands for addressing compliance issues, more disk space and associated overhead for backing up e-mail servers.

Avacom email-messaging Archive for Exchange Server helps you solve these challenges with an integrated, electronic archiving solution for Microsoft Exchange 5.5, Microsoft Exchange 2000 and 2003 Servers.

---

---

### Highlights

---

---

- automatically capture e-mail, instant message and attachments
- search and retrieve content for surveillance and investigation
- record detailed audits of all correspondence
- enforce retention periods and destruction rules
- provide full supervisory access to system data, indices and activities
- full text indexing capability from the Outlook client

Once messages are archived, users continue to easily and securely retrieve their e-mails and attachments directly from the Microsoft Outlook client or Outlook Web Access client—even years later. Locating pertinent details about past business transactions or answers to customers' questions requires only a few keystrokes.

---

---

**Benefits:**

---

---

- Trim the size of the Exchange database to reduce storage costs.
- Provide virtually unlimited mailbox space for users.
- Automated offloading to archives reduces requirements to manage e-mail server growth.
- Direct access to archives lets users view via browser or Outlook desktop.
- Delivers records management integration, supporting regulatory, legal and corporate compliance.
- Prevent unauthorized access to critical data.
- Improve email system performance.
- Single Instance Store assures that messages are archived just once.
- Manages its lifecycle and reduces costs with storage on your choice of devices.
- Use of Microsoft® Windows® services to automate tasks such as automatic start, lowering management costs.

**Protect your valuable business information**

Without archiving, the volume of e-mails and attachments on your Exchange Server would become unmanageable.

Avacom email and Messaging Archive for Exchange Server archives e-mail and associated attachments externally—and transparently to the end user—for secure long-term storage. Archived messages can be viewed or restored, and their associated attachments can be called up through links embedded in the message. Millions of e-mails, attachments, public folder documents and PST file content can be stored on scalable and secure back-end archive management repositories that offer virtually unlimited growth and support the broadest range of storage options.

Because you can move older, inactive documents to an external archive, the size of your Exchange Server storage is reduced while providing virtually unlimited mailbox space to the end users, lowering system backup/restore and recovery times as well as associated maintenance costs and efforts.

**Adhere to information retention rules and automate record-keeping**

Even though e-mails and electronic attachments mean freedom from paper, businesses still must demonstrate accountability for their actions. Avacom email and Messaging Archive for Exchange Server helps businesses adhere to these and other legal requirements, without worrying about the burden of long-term storage on their messaging system servers. You can determine the archiving policies that automatically copy required documents into the appropriate repositories, cutting down on administrative costs.
