

Avacom, Inc. -- Solutions and Services Designed for You.

In 1992 Avacom, an established IT service provider in Southern California, added image-based document and content management to its set of products and services. Since then, Avacom has added a number of different media to its content management including electronic documents (MS Word, Excel), print files, faxes, different file formats (PDF, CAD, etc.), video, audio, e-mail, and web content. As an early provider in this arena Avacom has continued to add new solutions and services to maintain its leadership role.

The solutions include two significant, industry-leading, application enabling utilities: Avacom InfoCapture and AvaFlow. Each offers significant productivity gains for client business processes. Together they combine those gains while enhancing client standard business applications. Avacom offers this combination for a specific application area in its Avacom Accounts Payable Solution. Avacom will continue to increase its solution offerings.

Today with thousands of users, hundreds of installations and more than 50 business partners, Avacom remains a premier Content Management and Workflow Solution provider for enterprise-wide deployment. Avacom's professional staff in the United States and Canada continues to provide high-level customer support for its products.

From its headquarters in Orange County, Avacom's management team directs its development and deployment of image-based content and document management products and services. These will continue to have the same level of quality and support from which Avacom derives and deserves its reputation.
